

TARGON

communication for care

complete patient and resident confidence and total care management

“We find our new Iris system very simple to use and reliable. Overall we are highly delighted with the system and would thoroughly recommend it.”

The House of the Resurrection, Mirfield

“Our Marquis III is so easy to use as everything is totally integrated.”

Mulgrave Nursing Home

TARGON

Targon has over 15 years experience within the nurse call industry offering a full design, supply and installation service.

All our systems are totally reliable and user friendly for both patients and staff alike. In addition, we offer a bespoke design service with our own in-house programming facility ensuring that everything is how you want it, right down to the very last detail.

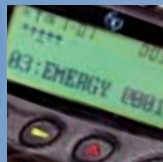

Our sales staff are happy to visit you on site and discuss your requirements as well as give a demonstration of the equipment.

We have two main systems, the IRIS radio system and the Marquis III hardwired system. The two systems can be integrated offering a mixture of hard wired and wireless units giving you greater flexibility. The Marquis III hardwired system can be used on existing cabling (4 wires required), however in installations where there is no cabling or it cannot be installed without difficulty, the IRIS radio system is ideal due to its wireless nature.

With rental and leasing terms available, customers can benefit from affordable installation on a payment plan best suited to their requirements. Rental contracts have the added benefit of a Targon fully inclusive and comprehensive maintenance contract for added security and peace of mind.

Our fleet of fully qualified service technicians is on call 365 days a year 24 hours a day. Targon also have their own bespoke service software package which can produce reports tailored to the clients requirements.

Targon is fully equipped with its own plant and service equipment to respond to any call out and our technicians receive continuous training to ensure their skills are kept abreast of the ever increasing technological developments.

Two systems designed to give you complete confidence and peace of mind
